3	NV-ECFX	Parson	Full Suppression	27 mi N of W. Wendover, NV	326	0	40%	7/06/20	Type 3 IC Radar	0	6	0	1	1	197	Maintain current	GHMA Sage-Grouse, critical elk, deer & antelope habitats
4	ID-IFD	Howe Peak	Full Suppression	3 mi SW of Howe, ID	6,621	1,621	60%	7/04/20	Type 3 IC Berkebile	1	3	0	0	1	119	Maintain current	No likely threat
5	NV-ELD	Twin	Full Suppression	10 mi NE of Alamo, NV	25,781	0	70%	7/11/20	Type 3 IC Washburn	0	2	0	0	0	63	Maintain current	Perelite Mine, Power lines, Hwy 93
	NV-ELD	Miller	Full Suppression	30 mi E of Pony Springs, NV	4,519	0	90%	7/04/20	Type 3 IC Oakleaf	2	4	0	0	0	148	Maintain current	Ranches, critical SGH areas
	UT-SLD	Knolls	Full Suppression	5 mi S of Saratoga Springs, UT	12,584	0	97%	7/04/20	Type 4 IC Blaine Coombs Matt Jarvis (T)	0	1	0	0	0	23	None	Monitor and maintain control lines
*** Notes of Significance ***																	
Fires highlighted in yellow have submitted a final ICS-209																	
	UT-SCS	Power Line	Full Suppression	3 mi W of Mona, UT	710	0	100%	7/04/20	Type 4 IC Jamie Duffy	0	1	0	0	0	40	None	None
	UT-CCD	Wire Pass	Full Suppression	25 mi E of Kanab, UT	1,588	0	100%	7/01/20	Type 4 IC Nick Adamson	0	1	0	0	0	37	None	None

Evening Brief

Date: Friday July 3rd, 2020

Weather Summary

***** High Risk Saturday for Dry Lightning Southeastern UT *****

***** High Risk for Windy/Dry Sierra Front Saturday and through Next Week into Central Great Basin *****

Mostly dry lightning will develop this afternoon across eastern Utah and the Arizona Strip. Due to the combination of dry lightning and critically dry fuels,

"High Risk" for Lightning has been issued for Saturday mainly across SE Utah. Strong outflow winds will accompany thunderstorms. Storm coverage will be mostly isolated on Saturday. Gusty winds are expected to develop across western Nevada on Saturday afternoon.

It is of significant concern that an extended period of dry, windy weather will follow a round of dry lightning.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 3	New Fires and Acres: 18 fires 671.6 acres; 7,827 acres large fire growth

Fuels/Fire Potential

Unseasonably cool and wet weather across the northern part of the Great Basin has resulted in higher fuel moisture and lower ERCs than are typical for the time of year. However, south of the I-80 corridor, precipitation has been much more sparse and the brief effects of cooler temperatures and higher humidity were temporary. Fuels south of highway 50 corridor have remained critical and will continue to support ignitions and large fire growth during windy afternoon periods, or with dry lightning.

Across lower elevations, grasses are mostly cured below 5000 feet in southern Idaho and below 6000 feet most other areas further south. Some new grass growth may be emerging in areas that have received over an inch of precipitation the past 3 weeks, namely northeast Nevada, far northern Utah and much of southern Idaho.

Sagebrush moisture in the northern portion of the Great Basin is generally above normal and above the 120% threshold. However, across the central and southern portion of the area sagebrush moisture is at or below normal for the time of year.

Resources:

Aviation within the Great Basin

- 1 VLAT, 4 LATs, 2 Scoopers
- 20 SEATs
- 7 Type 1 Helicopters / 6 Comm.
- 7 Type 2 Helicopters / 6 Comm.
- 16 Type 3 Helicopters

Crews Committed within the Great Basin

- 22 IHCs Committed / 1 Avail.
- 30 T-2 IAs Committed / 6 Avail.
